The Ranbuild Rural Range.

Every shed in the Ranbuild Rural range has been designed to give you the strongest, most reliable building possible. The galvanised steel framework provides strength and versatility not available in other building types. Couple this with lower cost compared to a custom made building and you have excellent value for money. With over 55 years experience in the Steel Shed Industry, Ranbuild buildings are well and truly tried and tested.

Versatile

Ranbuild Rural buildings cover a wide range of spans, lengths and heights. The modular system allows you to customise the building to suit everything from your businesses needs to the location. Choose long lasting ZINCALUME® or one of the many colours available in COLORBOND® steel cladding to suit all your rural and small acreage needs.

Durable

Ranbuild rural designed buildings are manufactured from the finest Australian made steel products, for added strength and durability. Framing and cladding are guaranteed by BlueScope Steel. Ranbuild designs are fully engineered in accordance with Australian Building Codes, and are supplied with documentation to simplify building approval.

Adaptable

Ranbuild rural designs are more than just sheds. There are a host of add-on extras such as personal doors, vehicle or large machinery roller doors or sliding doors. There's also a range of windows and translucent wall and roof sheets to provide natural lighting. You can also add ventilators and insulation to make the building the way you want it.

Economical

All buildings come in kit form, complete down to the last washer. The galvanised components are pre-formed to give you optimum value for money. You can choose whether to assemble your building yourself and save, or your local accredited Ranbuild Dealer can help you organise an experienced construction team to construct your building.

Choice

One of the unique advantages of the Ranbuild Rural building range is it allows you to choose the type of construction. There's the heavy duty Covermaster clear span gable roof series, the Economical Big G range, the multispan type with internal supports and the smaller monoslope range up to 12m span. The choice is yours.

MACHINERY SHEDS

Value and appreciation

Farms need buildings that not only look good, but are functional, weather proof and secure. Galvanised steel frame, metal clad buildings require minimum maintenance and maintain their appearance for years.

Customised the way you want it

Roller doors, sliding doors, steel partition walls, windows, skylights and internal insulation are just some of the standard options. Ranbuild designs are modular design allowing you have a mix of bay sizes in the one building. You can also have fully open ends or extra wide bays for broad acre implements.

Large spans

Clear span buildings to protect large floor areas are not the only option. If a row or two of internal columns don't represent a problem then a Ranbuild Multispan building will do the job at a lower cost. No box gutters to overflow or block-up either.

Functional

Some land owners just want an open side shed to protect their vehicles and implements. Others prefer to have areas designed for specific use such as a workshop, store room or garage. With a Ranbuild design it is possible to have almost any combination under the one roof.

HAY SHEDS

Production and Storage

Ranbuild can cover almost any produce on a farm. If you have lots of hay in rectangular, square or round bales, a Ranbuild hay shed will cover it. Your hay shed can also be used to protect fertilizer, cut forage or temporary mesh silos when there is no hay.

Size is no problem

Big or small, there's a Ranbuild hay shed to fit your situation. With clear spans ranging from 6m to 30m and bay widths from 3m to 7.6m, almost anything is possible. Ranbuild hay sheds are extendable too. You can add extra bays to the length and awnings to the sides right from the start or later as your requirements increase.

Choice of models

For farms well away from the alpine or cyclonic regions, consider a Ranbuild monoslope design. They provide the lowest cost per bale for small quantities of hay. Gable roof hay sheds are more suitable for medium quantities and or where added protection is required. If you want to cover large amounts of hay at the lowest possible cost then look no further than the Ranbuild multispan hay shed range.

Cost effective

There is no more cost effective farm building than a Ranbuild hay shed. The value of hay saved will repay the price of the shed in only a few years. Standard options such as side and end walls or gable infills can be added as required to provide additional protection at a low cost.

STORAGE SHEDS

Grain storage

Ranbuild Grainstores are the ideal way to protect stored bulk grain at a low cost. They include many exclusive features such as a 20 degree gable roof with specially rolled purlins to reduce dust collection. Grainstore buildings are designed for fast throughput allowing even the largest semi-trailers to tip their loads inside the shed. Add a bulk head, aeration and tarps, and you can look forward to safe, economical, long term storage for your valuable grain.

Sizes: Grainstores are 27m span x 7.3 wall height in any number of 6m bays. They have a curtain wall on one end and both sides.

General storage

Ranbuild Rural designs not only look good, but are functional, weather proof and secure. With a Ranbuild Rural building, goods can be loaded and unloaded day or night, hail, rain or shine, 365 days of the year.

Livestock shelters.

Protect your valuable animals with a hygienic and low maintenance paddock shelter. Choose from gable or monoslope roof designs, partly enclosed or open. Ranbuild livestock shelters may also be fitted with modular stable panels to make a low cost set of stalls.

Stockyard shelters.

Clear span Covermaster gable roof shelters or Multispan covers provide all weather protection for important working areas. Reduce animal and operator stress, and get the job done even if it's raining cats and dogs. Solid shade shelters are one of the best ways to help prevent skin cancers or other ailments caused by ultra violet and infra red rays from the sun.

BARNs

Ranbuild Barn

The Ranbuild Barn with its stepped roof line provides for options difficult to add to conventional buildings. You can choose a 10 degree or a 27.5 degree roof pitch for the centre section. Translucent panels and ventilators are easily fitted to the wall between both roofs to provide natural lighting and cross ventilation. The internal columns are ideal for attaching panels or dividers for all sorts of uses. Ranbuilds mezzanine flooring designs are ultra strong for all your storage and additional space needs.

Aussie Barn

If you want the traditional Australian bush shed look, but without the usual dry rot, termite and fire problems, go for a Ranbuild Aussie Barn. You can choose from a mixture of spans and lengths, and have one or two awnings or annexes. Give it an original corrugated iron look with Lysaght Zincalume® Custom Orb® or blend it into the environment with one of the many Colorbond® steel cladding colours.

MONOSLOPE BUILDINGS

Monoslope Buildings

Ranbuild can cover almost anything on the land, our unique & popular range of Monoslope (Skillion) Buildings, can provide all your workshop & storage requirements. With the single 5° roof pitch you don't lose as much valuable internal height, with standard options such as, Roller doors, sliding doors, adjustable bay sizes, personnel doors, windows, skylights, Gutters & down pipes Ranbuild have you covered

Special applications

Sometimes there is a need for building to do a special job. Rather than pay for a one-off custom building at a premium price, Ranbuild can often provide a lower cost alternative from their standard range. No one makes a bigger, better range of Rural buildings than Ranbuild.

With these options, you can design the perfect building for your needs.

Sliding Doors

Ranbuild are industry leaders for steel sliding doors. Fully enclosed top tracks house multi ball bearing carriage assemblies. Galvanised steel frames and high tensile cladding are used for their strength and appearance.

Access Doors

Steel framed, metal clad personnel access doors provide security and heavy duty service. Knob fittings are supplied as standard or internal lever action latches can be ordered for exit doors.

Overhangs

One of the great strengths of Ranbuild's Covermaster is the ability to support eaves overhangs and cantilever roof extensions. Where extra weather protection is needed around windows or doorways, a cantilever roof extension is the natural solution.

Add On Space

Increase your covered floor space with an awning or annexe. Awnings are enclosed on the roof only for traffic and air movement. Fully enclosed annexes provide total security and weather protection.

Natural Lighting

Save electricity costs and fit your building with reinforced fibreglass skylights or wall highlights. A wide range of sliding windows can be fitted to walls almost anywhere around your building. All Covermaster window opening are fully steel framed.

Rainwater Goods

If you value rainwater run-off, you won't find a better gutter and down pipe system. The large, coated steel, rectangular down pipes and square profile gutters are also designed to match the cladding of your building.

Roller Doors

Roller doors are the ideal choice for industrial and commercial applications, as they provide high standards of durability, performance and importantly, operational ease.

Designed to prevent the penetration of moisture and dust, roller doors minimise the chances of corrosion, and protect against dirt, leaves and weather.

While strength is an obvious priority, you can still maintain the attractive appearance of your building with doors available in a range of COLORBOND® and ZINCALUME® Steel for compatibility with cladding materials.

You'll enjoy smooth, quiet operation from both the manual and electronic doors. All doors custom made to suit your application, so there's no compromise on functionality.

Ventilators

Wind-driven roof ventilators exhaust hot, stale air from buildings, allowing it to be replaced at low level with fresh air at ambient temperature. The result is a more pleasant and healthier working environment, resulting in improved productivity.

Colour Your World

We recommend checking your chosen colour against an actual sample before purchasing.

LYSAGHT CUSTOM ORB®

LYSAGHT TRIMDEK®

Quality Cladding

Choose from ZINCALUME® or COLORBOND® steel cladding in up to 20 colours, 2 thicknesses and 2 profiles for attractive building that is also durable, strong and thermally efficient.

With the advanced Super Polyester pre-painted coating technology, your roof will stay looking great for longer. The superior oven baked finish resists chipping, peeling and cracking.

COLORBOND® steel cladding is non-combustible, termite resistant and weather tight for protection against harsh Australian conditions.

Profiles

LYSAGHT CUSTOM ORB® has a corrugated profile, equally at home with traditional and contemporary design. It is long, wide, strong, lightweight and economical. It can be aligned quickly and easily.

LYSAGHT TRIMDEK® is a subtle square fluted steel cladding. The fluting in the pans provides strength and long spanning capabilities.

Visit your local Dealer's display site to see many of these options fully constructed. Your local Accredited Ranbuild Dealer can help you to make the choices that will best suit you and to finalise your design. If you have any special requests, just ask and your local Ranbuild Man will be happy to investigate the possibilities.

What makes Ranbuild Rural buildings better?

Ranbuild Covermaster sheds are better because they are designed to suit you and still look great even though they are fully engineered for durability and strength. Here are some of the features that make a Ranbuild shed top quality.

1

Ranbuild Covermaster buildings have a framing system like no other. The galvanised steel components bolt together for added strength and longer life under all sorts of applications.

2

The back-to-back galvanised steel intermediate columns and rafters provide a strong and functional frame at a lower cost than comparable hot-rolled or fabricated members.

3

Galvanised steel C section roof purlins and wall girts are flush with the outside of columns and rafters. This allows for smooth, continuous cladding without reducing valuable internal space.

4

All nuts and bolts are made from high tensile steel, zinc coated for added protection. When cast into the concrete footings, the anchor bolts guarantee secure fastening down in all weather conditions.

5

Ranbuild's unique modular system means you can add bays of various sizes to make the building fit your site. Bays may be open, enclosed or supplied with a variety of standard options.

6

All window and door openings are fully framed for strength and reliability. You can add vertical roller doors or top hung horizontal sliding doors almost anywhere around the building.

7

Choose from the extensive range of durable and attractive COLORBOND® or ZINCALUME® steel cladding. Framing and cladding materials are guaranteed by BlueScope Steel for up to 15 years (conditions apply).

8

Optional extras includes awnings, annexes, windows, skylights, insulation and ventilation items. Just about everything you need to make your shed the way you want it.

9

Ranbuild's design range covers almost all site and wind code requirements in Australia. There are models covering the extreme cyclone areas in the North down to the snow regions of the South.

COVERMASTER SPECIFICATIONS

	GABLE ROOF	MULTISPAN	MONOSLOPE
Spans	Any clear span from 6m to 35m	18m to 60m in 3m increments	Clear spans of 6, 7.6, 9 and 12m
Length	Any length - minimum of 2 bays	Any multiple of bays - minimum of 2 bays	Any multiple of bays - minimum of 2 bays
Heights	Any wall height from 2.5m to 8m	Wall heights from 3 to 7.3m	Wall heights from 3 to 4.8m
Roof	10 or 26* degrees pitch	5 or 10 degrees pitch	Approx 3 to 5 degrees pitch
Bays	3m to 9m open or enclosed	3, 3.8, 4.5, 5.3, 6 and 7.6m	3, 3.8, 4.5, 5.3, 6 and 7.6m
Materials	<ul style="list-style-type: none"> • Galvanised steel back to back C section mainframe columns and rafters • Galvanised steel C section, bolt fastened roof purlins and wall girts • Preformed galvanised steel apex connectors, braces and footing base plates • High tensile steel, zinc plated cast-in footing anchor bolts • Zinc plated high tensile steel to steel bolts, washers and nuts • Long life, class four self tapping roof and wall cladding fasteners • Genuine ZINCALUME® or COLORBOND® steel cladding to roof and enclosed walls • Custom formed high tensile steel barge, ridge and corner flashings 		
Features	<ul style="list-style-type: none"> • Fully bolted main and sub frame connections • Choice of two cladding profiles and thickness • Enclosed, open and partly open bay combinations • Clear span design with minimum loss of internal space • Wide ranges of proven and tested standard designs • Models for 41, 47 or 55m/s wind speed areas 		
Optional Extras	<ul style="list-style-type: none"> • Gable infills, side and end curtain walls • Truncated beams for wide bays or openings up to 12m • Eaves overhang or cantilever roof extensions • Full size commercial grade rectangular gutter and down pipes • Sliding side and end wall top hung doors • Up to 5m wide roller doors in side and end walls • Steel framed personnel access and fire exit doors • Aluminium framed sliding glass windows • Framed openings for sliding glass doors • Reinforced fibreglass roof skylights and wall highlights • Passive or rotary roof and wall ventilators • Full height partition and dividing walls • Side wall awnings and annexes • Foil backed roof and wall insulation • Load bearing Mezzanine sub floors • Experienced erection teams 		
Documentation	<ul style="list-style-type: none"> • Comprehensive 60 page illustrated erection manual • Fully detailed architectural, steel marking and footing drawings • Printed Bill Of Materials showing quantities and part numbers • Certified engineering drawings for building approval 		
Warranty	Framing and cladding materials guaranteed by BlueScope Steel for up to 15 years (conditions apply)		
Delivery	Australia wide from factories in every state		

Some limitations apply to the above specifications in high wind speed and cyclonic areas. All dimensions are nominal and generally rounded to the nearest 100mm. * 26 degree pitch only available on spans less than 10m

Compare the best with the rest.

Ranbuild is a foundation member of the Steel Shed Group so you can be assured that all designs are of the highest quality and comply with Australian Standards and safety regulations. They are subjected to rigorous testing and are manufactured using only quality materials. Ranbuild has over 55 years experience in the steel shed industry so you'll know that your Ranbuild shed will not only look good, but is able to withstand some of the toughest conditions.

Ranbuild sheds are available through a nationwide network of independent Dealers. Your local Ranbuild Man can assist you with design choice, building approval and organise the construction of your shed if required.

✓	Designed in accordance with the Standards Association of Australia building codes
✓	Up to 15 years BlueScope Steel warranty on framing and cladding materials (conditions apply)
✓	Connection components rigorously tested for strength and quality
✓	All steel construction to resist termite, hail and fire damage
✓	Framing components galvanised for long life and low maintenance
✓	Vertical wall cladding to reduce upkeep and maintain appearance
✓	Modular system allows scope and flexibility in design and application
✓	Choice of multiple roof pitches to match your building type
✓	Designs and materials to suit environments ranging from the snow fields to cyclonic regions
✓	Engineering documentation provided for building approval application
✓	Full size gutters and downpipes to collect valuable rain water
✓	Factory packed kits shipped complete with no hidden extras
✓	Option to assemble yourself or allow your local Dealer to organise construction
✓	Computer generated concrete footing layouts and slab details
✓	Comprehensive construction manuals with over 60 pages of instructions
✓	Free quotations, site inspections and building approval assistance
✓	Australia-wide display and sales centres through a network of independent Dealers
✓	Local, interstate and International delivery and shipping service
